SUMMARY

Senior Mobile Engineer with 5 years of experience designing, architecting, and delivering high-performance Flutter and Android applications. Specialized in building scalable, production-grade fintech products across payments, lending, and consumer platforms. Proven track record of driving architectural decisions, optimizing performance, improving stability, and accelerating release cycles.

SKILLS

Languages & Frameworks: Flutter, Dart, Kotlin, Java, Android, Compose, KMM, MVVM, Spring Boot, Pigeon

Architecture & Engineering: Clean Architecture, Modularization, State Management, Performance Optimization, Testability, CI/CD

Cloud & Infrastructure: Firebase (Auth, Firestore, RTDB), MongoDB, Redis

Tools & Analytics: Git, GitHub, Mixpanel, Datadog, Sentry, Play Store, App Store

EXPERIENCE

Senior Mobile Engineer

May 2026 – Present

Moniepoint Group, Bengaluru

- Leading the end-to-end migration of the Overdraft module (Business Loans) to a new core app architecture and design system, as part of a company-wide codebase modernization initiative.
- Own the Working Capital Loans (WCL) module within Business Loans — driving bug fixes and feature improvements for a core lending product.

Mobile Engineer (Consultant)

Oct 2025 – March 2026

CRED, Bengaluru

- Migrated the UPI scanner module from Flutter to native Jetpack Compose to improve camera initialization latency and runtime performance, enhancing scan responsiveness.
- Partnered with platform and product teams to ensure seamless interoperability between Flutter and native layers, maintaining UX consistency.
- Contributed to performance-focused engineering decisions impacting critical payment flows.

Software Development Engineer – II

Oct 2023 – Sep 2025

Uni Cards, Bengaluru

- Architected and led development of Fixed Deposits and multi-credit card support to enable scalable financial workflows and improve platform extensibility.
- Delivered key lending features, including personal loans and P2P lending, contributing to core revenue-driving initiatives.
- Refactored the design system to improve UI scalability and consistency, reducing visual inconsistencies by 30%.
- Implemented comprehensive unit and golden test coverage to improve release stability, reducing regression defects by 30%.
- Drove improvements in app maintainability and developer velocity through modularization and architectural refinements.

Software Development Engineer

Jan 2021 – Oct 2023

Fello Finance, Bengaluru

- Built a gamified investment application using Flutter and Firebase to drive user engagement through payments, skill-based games, and rewards.
- Designed and implemented a server-driven journey framework to enable dynamic UI flows with custom animations and real-time API updates.
- Established CI/CD pipelines for automated multi-flavor deployments, accelerating release cycles by 40%.
- Optimized rendering and state update strategies to ensure smooth UI performance across complex animated interactions.

LIVE PROJECTS

Cabo: Real-time Multiplayer Card Game

Architected and developed a real-time multiplayer card game using Flutter, Node.js, and Firebase, supporting synchronized gameplay across Android, iOS, and Web.

Designed a hybrid backend architecture using serverless functions for transactional workflows (auth, referrals, redemptions) and a dedicated Node.js server for latency-sensitive real-time interactions (game state, chats).

Implemented monetization via Google AdMob and mediated ad networks (AppLovin, InMobi).

Built engagement systems including referrals, in-app economy (coins, gems), reward store, daily spin, streaks, leaderboards, and league progression.

Instrumented analytics using Mixpanel and Microsoft Clarity to track user behavior and conversion funnels.

Achieved 10K+ downloads and 100 DAU.

[Play Store](#) [App Store](#)

Playables: Interactive Ads

Architected and built customizable HTML5 playable ads compatible with Meta and Google Ads ecosystems, enabling interactive ad experiences.

Engineered a modular analytics SDK to standardize event instrumentation across playables, supporting scalable tracking of engagement and conversion funnels.

Developed a metrics dashboard for advertisers to visualize campaign performance, including interaction rates and conversion signals.

Drove performance optimizations by reducing playable bundle size through sprite sheet adoption, font format optimization, and FFmpeg-based video compression, improving load times and ad delivery efficiency.

EDUCATION

Bachelor of Computer Applications, BIT Mesra

June 2018 – June 2021

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, System Architecture

EXTRA-CURRICULAR

- Publish technical blogs and developer-focused content across Medium, LinkedIn, and Instagram, reaching 20K+ Flutter developers weekly.
- Actively building a personal brand centered on mobile engineering, developer education, and content creation.
